

ALL CAP CONVERTIBLES FUND (S)

March 2020

INVESTMENT OBJECTIVES AND POLICY

The fund is a bond fund that intends to achieve constant returns. It invests predominantly (minimum 51% of fund volume) in convertible bonds of issuers with different market capitalisation who are based in Europe or have their main focus of activity in Europe and in bonds with exchangeability into European shares. Derivatives are used as part of the investment strategy and must not exceed 100% of fund volume. For details about risks and opportunities please refer to the fund prospectus. The average quality of the fund holdings or in case there is no rating, of the issuers, has to be investment grade (Standard & Poor's BBB-, Moody's Baa3, Fitch BBB- or comparably ratings of other rating suppliers/rating valuation). The average rating of the fund holdings is determined on the basis of ratings by Standard & Poor, Moody's, Fitch, comparable ratings of other rating suppliers and ratings by Raiffeisen RESEARCH GmbH.

Risk and return profile:

Investment horizon : 10 years

— CONVERTINVEST All Cap Convertibles Fund

1) Past performance is not a reliable indicator of a fund's future performance and it is not possible to draw conclusions from past performance with respect to the future development of the fund. The analyses and conclusions are general in nature and do not take into account institutional investors' specific needs in terms of yield, tax or risk tolerance. Securities services are generally associated with additional costs, which can have a negative impact on performance. The data are net of fees. The numbers given do not take into consideration the one-off marketing fee of up to 3,5% and individual costs, such as fees, commission and other third-party payments which, if taken into consideration, would have a negative impact on performance. The disclaimer and the legal notice at the end of this document (page 3 of 3) are valid for this page too.

March 2020

OPPORTUNITIES & RISKS CONSIDERATIONS

Opportunities: The conversion right offers participation in the increase of share prices. The bond part offers protection in weak equity markets. The addition of convertible bonds of midsize companies allows participation in the development of this dynamic market segment. The asymmetric nature of convertible bonds claims to achieve a superior risk-return relationship in comparison to a combination of bonds and stocks. **Risks:** Risks that are not included in the risk classification but are of importance for the fund: Credit risk: the fund invests part of its capital (directly or through derivatives) in bonds and/or money market instruments. It is possible that the issuers of these securities become insolvent or suffer downgrades in their credit rating. Hence these bonds and/or money market instruments (or credit derivatives) might lose some or all of their value. Liquidity risk: there is a risk that a position cannot be liquidated in time at an appropriate price. This risk can also result in the suspension of share redemption. Default risk: The fund closes contracts with different contract parties. There is the risk that a contract party e.g. in the case of insolvency cannot honour the claims of the fund. Operational risk, custody risk: Due to the failure of internal processes / systems or due to external events (e.g. natural disasters) losses are possible. There is the risk of loss of the assets of the fund due to insolvency, non-diligence or illegal conduct of the custodian or an under-custodian. Risk by using derivatives: Derivatives are permitted to be used not only for protective purposes but also actively in the investment process whereby the risk of price swings in the price of the fund increases. For details about the risks please refer to the fund prospectus.
